SEVENET

KNOWLEDGE

EXPERIENCE

AWARENESS

Sevenet S.A. works for one of the largest Polish enterprises and institutions. The company offers designing services, implementing, configuring and servicing ICT solutions. Thanks to having the best specialists, it guarantees services on the highest level. The company's many years of presence on the domestic market cooperates with global producers of IT solutions. This allows on the implementation of integrated ICT solutions that they bring measurable benefits for customers.

OUR MAIN PARTNERS:

ACCESS TO THE NETWORK

Stable, secure and scalable LAN / WAN networks, including the wireless network, are features which under a number of modern solutions are hidden, giving unlimited access to the company's services and resources.

LAN / WAN networks:

- We design and build stable, modern LAN / WAN networks in both enterprises from the SME sector and in large companies,
- We are expanding and updating existing LAN / WAN networks, installing structured cabling of network.

WLAN networks:

- Modern, reliable and scalable, configured and monitored from a central management,
- Adapted to the needs of the client and the services in the company.

BUSINESS COMMUNICATION SYSTEMS

We offer systems made for modern business communication related to B2B and B2C, including IP connection or video-conferences. These solutions give many possibilities, simplify contact between departments, remote workers and reduce infrastructure management only to an IP network.

- We offer releases including IP telephone communication and voice mail in the headquarters or between branches connected by WAN (depending on the client's needs),
- By using the voice gate function that routers have, we connect IP telephony with the world traditional telephony while maintaining the quality of services in which the transmitted voice is delay-free,
- We provide modern video solutions - starting from personal (desk) terminals, such as IP phones with cameras, video telephones and tablets up to the solutions used in conference rooms where large video terminals allow participation in meetings for many people at the same time,
- We connect devices for group work with telephony and video conferencing, ensuring comfortable environment for cooperation of every modern organization,
- The whole solution is completed with applications that enable effectiveness of the solution and depending on the client's needs make them more individual.

COMMUNICATION WITHOUT BARRIERS

This solution made for elimination of barriers communication, with a minimum effort of the institution, store or office. The system works on a simple to use the application possible to install on any device with camera, microphone and the Internet access.

- System "Communication without barriers" is based on a solid foundation of modern technology and devices leading on the market manufacturers,
- "Communication without barriers" consists of the following items: devices (video terminal, laptop, smartphone), Internet, the position of an interpreter in Contact Center and the system management.

DATA SAFETY

We offer solutions that ensure security at various levels, including preventing hacker attacks, controlling access to information, and ensuring secure communication or Internet traffic control.

Proper security selection guarantees suitable protection of the given resources. We work with many recognized security industrial manufacturers and in our offer there are the best systems available in the world:

- Next – Generation Firewall,
- Next – Generation IPS,
- Sandbox offering protection against 0-day attacks,
- Content Security (Email i Web Security),
- Data Loss Prevention,
- Web Application Firewall,
- Virtual Private Network (IPSec i SSL),
- Protection (D)DoS,
- Authentication servers,
- Network Admission Control,
- Vulnerability testing systems.

CONTACT CENTER SYSTEMS

Cooperation and contact with clients is one of the effective aspects for any organization in a competitive economy. One of the most important challenges of Contact Center systems is the constant optimization of their processes. We are able to take up this challenge due to experience and qualified engineering staff. We offer advanced solutions used for cooperation and communication between companies and their clients.

- We design and introduce modern solutions in the organization of cooperation between the company and its clients, being in this process not only a supplier, but also a partner and advisor,
- We optimize and modernize existing Contact Center systems (including additional communication channels),
- All solutions include applications that enable extension functionality of the solution and individualizing it to the client's needs.

DATA CENTER

We design and implement specialized network and server solutions for both small and medium enterprises as well as large institutions. For small businesses and remote locations, we offer datacenter and virtualization solutions based on free-standing servers or service modules for routers. For larger enterprises with dedicated switches positioned to support data centers. We guarantee flexible and scalable an environment that can process huge amounts of data, thanks to enrichment infrastructure hardware for virtualization.

- We design server solutions based on free-standing servers or for companies from the SME sector service modules for routers,
- For large enterprises, we design server solutions using scalable architecture of servers programming,
- We enrich the existing environments with virtualization and creating automation cloud computing,
- We effectively secure and distribute the load within the planned or existing data processing.
